## Hungerford-Stoneridge Stormwater Management Facility Improvements

### Data Collection Phase

- Project Description:** The Department of Public Works has begun the design of the Hungerford-Stoneridge Stormwater Management (SWM) Facility Improvements project. Beginning the week of June 6, weather permitting, the city's consultant, *Bayland Consultants and Designers, Inc.*, will begin collecting data on the SWM facility and the surrounding forested area, including the trees, utilities, and topography. Data collection will involve surveyors with equipment, engineers/arborists, and other environmental professionals traversing the site in the areas delineated on the back of this advisory. Trees may be marked with temporary ribbons to assist in identification and inventory. The ribbons do not indicate tree removal.
- Purpose:** The SWM facility improvement project was recommended in the 2011 Cabin John Watershed Study as a crucial component to the long-term health of the watershed. The study was approved by the Mayor and Council in July 2011, and this project was included in the adopted Fiscal Year 2016 Capital Improvements Program. The project goals are to enhance the facility function through sediment removal, wetland enhancement, and modifications to improve maintainability and treatment.
- Location:** Cabin John Stream Valley Park at Cabin John Parkway and Leverton Road (see reverse side of this advisory).
- Timeline:** The data collection phase is anticipated to take approximately two months. Once complete, a community meeting will be scheduled this summer to obtain citizen input. This community meeting date will be included in a subsequent advisory. Throughout the design of the SWM facility improvement project, there will be multiple community meetings to obtain information about the project and provide comments.
- Cost:** Design: \$81,000. Construction (estimated): \$900,000.
